CANADA POST SHIPPING MODULE

INSTALLATION GUIDE

- After purchasing the **Rootways Canada Post Shipping Module** extension you will receive an email from us with your Domain License Key. Use this Domain and License Key for activating the extension for your Magento website. If you haven't received any email please contact our support team by emailing at help@rootways.com (**Note:** Please read our License [Terms and Conditions](#) carefully before using our products.)
- Use FTP Client (e.g. FileZilla or WinSCP) to upload all files and folders of the extension to your Magento site. After connecting to your website using FTP create “Rootways” directory under app/code/ then create “Canadapost” directory under app/code/Rootways.
- After creating directories, extract the extension zip file and upload it under app/code/Rootways/ Canadapost directory.
- After uploading, run this command from SSH `php bin/magento setup:upgrade`
- After running above script you can see the Canada Post Shipping method in the shipping method section of admin.
- Please add store address from the Magento Admin > STORES > Configuration > GENERAL > General > Store Information
- Please add shipping origin address from the Magento Admin > STORES > Configuration > SALES > Shipping Settings > Origin
NOTE: Origin address must be Canadian address.

***NOTE:** If you are still having any issues or have questions about our extension, please feel free to email us at help@rootways.com with all your questions and we will be more than happy to assist you.
