MEGA MENU FOR MAGENTO 2 **INSTALLATION GUIDE**

- After purchasing the ‘**Mega Menu Extension for Magento 2**’ extension you will receive an email from us with your Domain License Key. Use this Domain and License Key for activating Mega Menu extension for your Magento website. If you haven't received any email please contact our support team by emailing at help@rootways.com (**Note:** Please read our License [Terms and Conditions](#) carefully before using our products.)
- Use FTP Client (e.g. FileZilla or WinSCP) to upload all files and folders of the extension to your Magento site. After connecting to your website using FTP create “Rootways” directory under app/code/ then create “Megamenu” directory under app/code/Rootways.
- After creating directories, extract the extension zip file, take all files and folders from “app/code/Rootways/Megamenu/” and upload it under app/code/Rootways/Megamenu directory of your website. If you will upload the extension to the proper place then it will look as shown in the following screenshot.

- After uploading, run this command from SSH `php bin/magento setup:upgrade`
- After running above script, you can see mega menu extension at front side.
- First time after installation of **Rootways Mega Menu** you will see simple dropdown of Categories and Subcategories from the main menu. To modify Mega Menu options, you can login to Magento **Admin** → **PRODUCTS** → **Categories** and select **Category** to modify. You will see an additional section called “Rootways Menu” from where you can define Menu type based on your requirements.

***NOTE:** If you are still having any issues or have questions about our extension, please feel free to email us at help@rootways.com with all your questions and we will be more than happy to assist you.

UNINSTALLATION GUIDE

Follow below steps if you want to completely remove our mega menu from your Magento 2 website.

Step 1: Open "eav_attribute" table of your database and delete all entries of our mega menu. usually, those entries start with. "megamenu_" (check below screenshot)

The screenshot shows a database table management interface with the following table structure:

id	name	type	value
256	megamenu_type	3	NULL
257	megamenu_type_numofcolumns	3	NULL
258	megamenu_show_catimage	3	NULL
259	megamenu_show_catimage_img	3	NULL
260	megamenu_show_catimage_width	3	NULL
261	megamenu_show_catimage_height	3	NULL
262	megamenu_type_leftblock	3	NULL
263	megamenu_type_leftblock_w	3	NULL
264	megamenu_type_rightblock	3	NULL
265	megamenu_type_rightblock_w	3	NULL
266	megamenu_type_header	3	NULL
267	megamenu_type_footer	3	NULL
268	megamenu_type_labeltx	3	NULL
269	megamenu_type_labelclr	3	NULL
270	megamenu_type_class	3	NULL

Below the table, there is a toolbar with the following options:

- ☒ Check all
- ☐ With selected:
- Edit
- Copy
- Delete
- Export

At the bottom, there are additional controls:

- ☒ Show all
- Number of rows:
- Filter rows:
- Sort by key:

Step 2: Then open "setup_module" and delete "Rootways_Megamenu" entire.

Step 3: Now remove all files and folder of our extension from /app/code and run these commands from your website docroot. php bin/magento setup:upgrade
