# MEGA MENU

---

## **INSTALLATION GUIDE**

**Version 1.0**

- After purchasing the '**Rootways Mega Menu**' extension you will receive an email from us with your Domain License Key. Use this Domain and License Key for activating Mega Menu extension for your Magento website. If you haven't received any email please contact our support team by email at support@rootways.com (**Note**: Please read our License Terms and Conditions carefully before using our products.)
- Use FTP Client (e.g. FileZilla or WinSCP) to upload all files and folders of the extension to your Magento site's root directory. This will not overwrite any existing Magento files; it will just add new files to your Magento installation.
- After uploading, login in to your Magento Admin panel and refresh cache. Go to **System**→**Cache Management**, select all cache types and under **Action** dropdown select '**Refresh**' and then **Submit**.
- Navigate to **System**→**Configuration**. If you see **Rootways Mega Menu** tab in the left column then it's installed properly.
- By clicking on **Rootways Mega Menu** tab if you get 404 page not found error, you need to log out of Admin Panel and log in again. This should resolve 404 errors.
- If you are using your custom package/theme then you will have to move following files to appropriate folders.

**From:** app\design\frontend\default\default\layout\rootmegamenu.xml

**To:** app\design\frontend\**YOUR\_PACKAGE**\default\layout\rootmegamenu.xml

**From:** app\design\frontend\default\default\template\rootmegamenu

**To:** app\design\frontend\**YOUR\_PACKAGE**\default\template\rootmegamenu

**From:** skin\frontend\default\default\rootmegamenu

To: skin\frontend\YOUR\_PACKAGE\default\rootmegamenu

- Now you should be able to see **Rootways Mega Menu** working on your website.
- First time after installation of **Rootways Mega Menu** you will see simple dropdown of Categories and Sub Categories from the main menu. To modify Mega Menu options you can login to Magento **Admin→Catalog→Manage Categories** and select **Category** to modify. You will see an additional tab called 'Mega Menu' from where you can define Menu type based on your requirements.
- Check our [Rootways Mega Menu User Guide](#) for more details on how to configure.

**\*NOTE:** If you are still having any issues or have questions about our extension, please feel free to email us at [support@rootways.com](mailto:support@rootways.com) with all your questions and we will be more than happy to assist you.
